THE ULTIMATE
METATRADER 4 HACKS

⭐

Agile Crosshair Triggering

The Crosshair is, hands down, one of the most effective tools in MT4. It's also one of the simplest to learn and use. Trigger the crosshair by middle-clicking your mouse (Ctrl+F) then left-click + drag to measure points and # of bars.
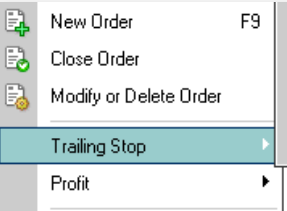

Non-Infinite Trendlines

⭐⭐

To infinity and beyond! Why are trendlines drawn as rays? Most of the time I use line segments, not rays. Right-click your trendline -> Trendline Properties -> Parameters tab and deselect the "Ray" checkbox. Problem solved!

Auto Trailing StopLoss

Want to automate your trailing Stop Loss? Sure! Right-click your order -> select Trailing Stop -> Select Desired Level. But be careful! For the trailing stoploss to work correctly your MetaTrader 4 has to be running and online at all times.
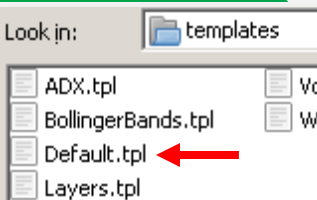

Quick Market Watch Cleanup

Brokers supply dozens of currency pairs alongside other instruments in your market watch. Do you really need that many? No? Open the ones you do use, right-click inside the market watch and "delete all" – only the ones in use remain.

⭐⭐⭐⭐

Default Template

Tired of customizing every new chart? Right-click your fav. chart layout -> Template -> Save Template ->(Attention here) call your template "Default". Hit Save. Now every new chart you open will have this layout. Neat trick, isn't it?
